28 # Makefile.master, global definitions for system source
29 #
30 ROOT=          /proto
31 #
32 #
33 # Adjunct root, containing an additional proto area to be used for headers
34 # and libraries.
35 #
36 ADJUNCT_PROTO=
37 #
38 #
39 # Adjunct for building things that run on the build machine.
40 #
41 NATIVE_ADJUNCT= /usr
42 #
43 #
44 # RELEASE_BUILD should be cleared for final release builds.
45 # NOT_RELEASE_BUILD is exactly what the name implies.
46 #
47 # __GNUC toggles the building of ON components using gcc and related tools.
48 # Normally set to '#', set it to '' to do gcc build.
49 #
50 # The declaration POUND_SIGN is always '#'. This is needed to get around the
51 # make feature that '#' is always a comment delimiter, even when escaped or
52 # quoted. We use this macro expansion method to get POUND_SIGN rather than
53 # always breaking out a shell because the general case can cause a noticeable
54 # slowdown in build times when so many Makefiles include Makefile.master.
55 #
56 # While the majority of users are expected to override the setting below
57 # with an env file (via nightly or bldenv), if you aren't building that way
58 # (ie, you're using "ws" or some other bootstrapping method) then you need
59 # this definition in order to avoid the subshell invocation mentioned above.
60 #

```

```

62 PRE_POUND=          pre\#
63 POUND_SIGN=         $(PRE_POUND:pre\#=%)

76 #
77 # The variables below control the compilers used during the build.
78 # There are a number of permutations.
79 #
80 # __GNUC and __SUNC control (and indicate) the primary compiler.  Whichever
81 # one is not POUND_SIGN is the primary, with the other as the shadow.  They
82 # may also be used to control entirely compiler-specific Makefile assignments.
83 # __SUNC and Sun Studio are the default.
84 #
85 # __GNUC64 indicates that the 64bit build should use the GNU C compiler.
86 # There is no Sun C analogue.
87 #
88 # The following version-specific options are operative regardless of which
89 # compiler is primary, and control the versions of the given compilers to be
90 # used.  They also allow compiler-version specific Makefile fragments.
91 #
92 #
93 __GNUC=              $(POUND_SIGN)
94 $(__GNUC)__SUNC=    $(POUND_SIGN)

908 # Rules (normally from make.rules) and macros which are used for post
909 # processing files. Normally, these do stripping of the comment section
910 # automatically.
911 #   RELEASE_CM:       Should be edited to reflect the release.
912 #   POST_PROCESS_O:   Post-processing for '.o' files.
913 #   POST_PROCESS_A:   Post-processing for '.a' files (currently null).
914 #   POST_PROCESS_SO:  Post-processing for '.so' files.
915 #   POST_PROCESS:     Post-processing for executable files (no suffix).
916 # Note that these macros are not completely generalized as they are to be
917 # used with the file name to be processed following.
918 #
919 # It is left as an exercise to Release Engineering to embellish the generation

```

```

920 # of the release comment string.
921 #
922 #   If this is a standard development build:
923 #       compress the comment section (mcs -c)
924 #       add the standard comment (mcs -a $(RELEASE_CM))
925 #       add the development specific comment (mcs -a $(DEV_CM))
926 #
927 #   If this is an installation build:
928 #       delete the comment section (mcs -d)
929 #       add the standard comment (mcs -a $(RELEASE_CM))
930 #       add the development specific comment (mcs -a $(DEV_CM))
931 #
932 #   If this is an release build:
933 #       delete the comment section (mcs -d)
934 #       add the standard comment (mcs -a $(RELEASE_CM))
935 #
936 # The following list of macros are used in the definition of RELEASE_CM
937 # which is used to label all binaries in the build:
938 #
939 #   RELEASE      Specific release of the build, eg: 5.2
940 #   RELEASE_MAJOR Major version number part of $(RELEASE)
941 #   RELEASE_MINOR Minor version number part of $(RELEASE)
942 #   VERSION      Version of the build (alpha, beta, Generic)
943 #   PATCHID      If this is a patch this value should contain
944 #                 the patchid value (eg: "Generic 100832-01"), otherwise
945 #                 it will be set to $(VERSION)
946 #   RELEASE_DATE Date of the Release Build
947 #   PATCH_DATE   Date the patch was created, if this is blank it
948 #                 will default to the RELEASE_DATE
949 #
950 RELEASE_MAJOR= 5
951 RELEASE_MINOR= 11
